

The `mathphysletter` class

Arno L. Trautmann*

May 7, 2009

Abstract

With the `mathphysletter` class, members of the mathphys-FS of Heidelberg can write letters in the corporate design of the university.¹ The user interface tries to be very easy and intuitive.

1 Important Notes

To use this class, please read section 2: User Interface carefully. This class must be compiled with \LaTeX . If you don't know about \LaTeX and how to use it, feel free to contact the author. You need to have the file `unilogo.jpg` in the folder you're operating in! Maybe the path will change, but you need the picture to successfully compile your document. The fonts `Goudy Old Style` and `Arial Regular`² are used. If you don't have this font, please contact the author or say `\documentclass[texfonts]{mathphysletter}`. Then the `lmodern` fonts will be used for the whole document.

²Maybe these fonts have different names on your operating system. Please contact the author if you notice any problems regarding fonts.

Contents

1	Important Notes	1

3.1	Preamble Settings	3
3.2	The Right Column	3
3.3	Page Layout	4
3.4	Macros for User Interaction	5
4	Example Document	7

2 User Interface

At the moment, there are 9 commands for the user. The red commands have to be used in the preamble; the black ones must *not* be used in the preamble! See section 4 for an example.

Empfänger This is the "to"-field of the letter. Use `\\` to separate the lines.

Anrede This is used for the opening, like `\Anrede{Sehr geehrte Damen und Herren,}`

Ansprechperson The contact person in the right column under the entry "Ansprechperson".

Email The e-mail address of this person.

Rückadresse The content of the "backaddress"-field. Default is the address of the FSK.

Gruß Sets a greeting under the letter. Please use it at the place in the document where it belongs. Do not set this one or the following commands into the preamble!

PS For a post scriptum.

Anlagen Enclosings.

Kopie cc to other persons.

Please notice that these commands are case-sensitive!

That's everything a normal user has to know about this class. The following section describes the implementation. Section 4 gives an example how to use this class.

3 Implementation

3.1 Preamble Settings

`xkeyval` is needed to define some keys for the layout. Not yet used, but necessary in the future.

`scr1ttr2` is used to produce the letters. Loading of packages and passing of options:

```
1 \RequirePackage{xkeyval}
2 \newif \iftexfonts
3 \texfontsfalse
4 \DeclareOptionX{TeXfonts}{\texfontstrue}
5 \DeclareOptionX{texfonts}{\texfontstrue}
6 \ProcessOptionsX
7
8 \LoadClass[ngerman]{scr1ttr2}
9
10 \RequirePackage{
11   babel,
12   geometry,
13   graphicx,
14   marginnote,
15   scrpage2,
16   xcolor,
17   xltextra
18 }
```

We need heavy use of `geometry` to achieve the layout:

```
19 \geometry{
20   top=60.5mm,
21   headheight=30mm,
22   %headsep=50mm,
23   headsep=0mm,
24   bottom=45mm,
25   right=68mm,
26   marginparsep=19mm,
27   marginpar=65mm,
28   bindingoffset=0mm,
29   left=25mm,
30 }
```

3.2 The Right Column

The right column is set using the following command. If `texfonts` is not set, it is written using Goudy-Old-Style font, else `lmodern` will be used.

```
31 \def\unired{
32   \color[rgb]{
33     0.650980392157,
34     0.207843137255,
```

```

35      0.18431372549
36  }
37 }
38 \newcommand\mathphysaddr{\small
39 \iftexfonts
40   \rmfamily
41 \else
42   \fontspec{Goudy-Old-Style}
43 \fi
44
45 \fontsize{9pt}{13pt}\selectfont
46 Fachschaft MathPhys\\
47 Im Neuenheimer Feld 305\\
48 D-69120 Heidelberg\\ \\
49 Fon: +49(0)\,62\,21/54\,24\,56\\
50 Fax: +49(0)\,62\,21/54\,24\,57\\ \\
51 E-Mail:\\
52 fachschaft@mathphys.\,fsk.uni-heidelberg.de\vspace{24mm}\\
53 \today
54 \\ \\
55 Ansprechperson \\
56 \Ansprech\\ \\
57 E-Mail\\
58 \EMail
59 }

```

3.3 Page Layout

We put the university-logo on the upper right. The date is set separately in the right column, so we don't need it in the class itself.

```

60 \date{}
61
62 \pagestyle{scrheadings}
63 \ihead{\hspace*{80mm}\includegraphics[height=45mm]{unilogo}}
64 \setheadwidth[0pt]{text}
65
66 \setfootwidth{text}
67 \cfoot{}
68 \ifoot{\vspace*{-15mm}\\\hspace*{121mm}
69   \mbox{\rm\fontsize{9pt}{13pt}
70   \iftexfonts\else
71     \fontspec{Goudy-Old-Style}
72     \fi\linethickness{.3mm}
73   \put(0,0){\unired\line(0,-1){80}}
74   \put(0,0){\unired\line(0,1){9}}
75   \hspace*{3mm}
76   Seite \thepage}
77 }

```

3.4 Macros for User Interaction

The following macros are defined for user interaction. See section User Interface.
Attention: \ZweiteSeite does not work so far! Has to be fixed.

```

78 \newcommand\Empfänger[1]{\def\Empf{#1}}
79 \newcommand\Anrede[1]{\def\Anre{#1}}
80
81 \newcommand\Ansprechperson[1]{\def\Ansprech{#1}}
82 \newcommand\Email[1]{\def\EMail{#1}}
83 \newcommand\ZweiteSeite{\endoffirstpage}
84 \def\endoffirstpage{\relax}
85
86 \setkomavar{backaddress}{Universität Heidelberg Fachschaftskonferenz
87                               Albert-Überle-Straße 3-5 69120 Heidelberg}
88
89 \newcommand\Rückadresse[1]{\setkomavar{backaddress}{#1}}
90 \newcommand\Gruß[1]{\closing{#1}}
91 \newcommand\PS[1]{\ps{#1}}
92 \newcommand\Anlage[1]{\setkomavar*{enclseparator}{Anlage}\encl{#1}}
93 \newcommand\Anlagen[1]{\setkomavar*{enclseparator}{Anlagen}\encl{#1}}
94 \newcommand\Kopie[1]{\cc{#1}}
```

And that's it for the preamble.

As the letter should be typeset automatically, the \begin{letter}{} and \opening{} are set automatically. The command \thispagestyle{scrheadings} is needed because scr1ttr2 defines another pagestyle for the first page. \ofoot{} suppresses the pagenummer for the first page.

If texfonts is set, lmodern is the default font of the document. Else Arial will be used; both are set in 10pt with 13pt skip.

```

95 \renewcommand\familydefault{\sfdefault}
96 \iftexfonts
97 \relax
98 \else
99   \setsansfont{Arial}
100   \setkomafont{backaddress}{\fontspec{Goudy-Old-Style}}
101   \setkomafont{addressee}{\fontspec{Goudy-Old-Style}} %% yes, the komafont is addressee with two "
102 \fi
103 \AtBeginDocument{
104   \fontsize{10}{13}\selectfont
105   \begin{letter}{\Empf}
106   \opening{\Anre}
107   \thispagestyle{scrheadings}
108   \marginnote{\hspace*{-12mm}}
109   \begin{minipage}{\marginparwidth}\vspace*{-55mm}\mathphysaddr\end{minipage} %%-39.5mm-13pt
110   }
111 }
```

At the end of the document, the letter is closed.

```

112 \AtEndDocument{
113 \end{letter}
```

114 }

And that's it. Happy T_EXing!

4 Example Document

This is a short document showing the usage of the `mathphysletter` class.

```
\documentclass[ngerman, texfonts]{mathphysletter} %The language must be given!
\usepackage{mypackage} % load whatever special package you need
\Empfänger{An \\ Die kleine Hexe \\ Blocksberg 7 \\ 666 Blocksberghausen}
\Ansprechperson{Die große Hexe}
>Email{grosse.hexe@blocksmail.org}
\Anrede{Liebe kleine Hexe!}
\begin{document}
Können wir dich dieses Jahr wieder besuchen? Ich freue mich schon sehr auf
die tolle Feier. Fritz will dir auch noch schreiben, aber auf der nächsten
Seite. \ZweiteSeite
Hallo Hexe!\\
Ich bin's, der Fritz. Freue mich, dich wieder zu sehen! Die Einladung für
meinen Geburtstag habe ich beigelegt.

\Gruß{Lieben Gruß\\ Fritz}
\PS{ps: Auch von der großen Hexe}
\Anlage{Einladung zu Fritz' Geburtstag}
\end{document}
```
